

CARE OF BIOPSY SITE

- You may remove the bandage strip tomorrow morning.
- Wash area with warm soapy water.
- Apply a thin layer of Aquaphor ointment or Vaseline (petroleum jelly) and cover with a fresh bandage strip.
- Repeat this routine once a day for until healed.

If you have sutures, follow the above procedure everyday until the sutures are removed.
It is VERY IMPORTANT to keep the biopsy site moist with ointment. Avoid Neosporin due to risk of allergic reaction.
